

I bought my Housatron Memorial Day weekend 2011.

Before I remodeled our master bathroom we had to use a squeegee every time we showered in order to keep the scale half way under control and then wipe it down with a towel. We still had scale buildup and had to clean the tile and door constantly to keep it looking half way decent. At the time, I was remodeling my master bath I knew I was going to need something to help control the scale, the shower heads I was installing and all the glass enclosures were much more than I had before. I was introduced to the Fluid Dynamics Housatron by a friend. I talked with her and found out how it works I also visited the website several times. After a little bit of reading I decided to purchase the equipment which was a Housatron.

After the installation of the Housatron the glass in my new shower looks just like it did the day it was installed. There is absolutely no scale buildup at all. This shower has 3 times the amount of glass as the old one. We use no chemicals at all on it now.

Another thing I have seen is the way the dishes are coming out of the dishwasher. They sparkle; I have never seen our dishes so clean! That was the first thing I noticed within 2 weeks of the installation.

Speaking of the installation it was very simple a friend of mine and his son did the installation and confirms that it was not at all complicated. So you wouldn't need a plumber if you are a handy man.

I would recommend this product to anyone that is looking for an alternative to salt softeners or just a way to reduce the buildup of scale.
