

Housetron Testimonial

February 14, 2011

On December 15, 2010 I purchased a home in Amarillo, TX the home was built in 1983. Upon inspection of some of the water valves and dishwasher I discovered there had never been any kind of water softening or water treatment system in the house.

In previous houses I have owned I have had a water softening system, the ones you have to add salt. Not being real sure this was the route I wanted to go I began looking for something else. When I came upon the Fluid Dynamics Housetron I became very interested in how the system works and the ease of installation.

I purchased the Housetron for 2 reasons: the water is especially hard in this area and without any kind of treatment you have to use an unbelievable amount of cleaning products in order to get anything clean, as well as the scaling that occurs without treatment of some kind so you spend a lot of time and money on replacing fixtures from scale build up, I like to use "green" products anytime I can find them so this was very intriguing to me.

The improvement in the water softness and elimination of scale on my shower heads and water faucets is phenomenal. We recently installed an ice maker, something I haven't ever had because of the hard water and the scaling problem. The scale buildup in our dishwasher was so awful we thought we would have to replace the dishwasher but decided to keep it for "testing" purposes. We are seeing a remarkable difference in the inside of the stainless steel dishwasher and all the other area of scale problems. Now we are confident the Housetron is also protecting our water heater.

We recommend this system to everyone we know and know they will have the same results.
